

OUINEX

KOL, Trading Creator & Community Partner Sourcing Brief

Operating specification for building a global network of high-intent trader-creators, streamers, signal providers and community operators.

TARGET

1,000 trading-focused partners

English-language content | Worldwide excluding the United States

01 Objective

Ouinex wants to build a global network of approximately 1,000 trading-focused creators, KOLs, streamers, signal providers and community operators. The goal is not to identify conventional large financial influencers. The priority is the long tail of the trading creator ecosystem: smaller, highly specialized individuals who already have - or are beginning to build - the attention of active traders.

- Generate authentic trading content featuring Ouinex.
- Generate actual trading users and trading volume through their audience or community.
- Identify promising partners before major exchanges, brokers and trading platforms systematically approach them.

Follower count is a secondary metric. The core search target is a small trader-distribution business, not a conventional influencer.

02 Geographic & Language Requirements

Requirement	Specification
Language	Primary focus on English-speaking or English-content creators. Native fluency is not required if the content or community operates predominantly in English.
Geography	Worldwide, excluding the United States.
Priority regions	UK, Europe, Middle East, Africa, Southeast Asia, South Asia, English-language Latin America, Australia, New Zealand and other international markets.
Decision principle	Audience relevance and trader quality matter more than the creator's physical location.

03 Core Philosophy: Find Traders, Not Influencers

The sourcing algorithm should not behave like a conventional influencer discovery engine. We are not primarily looking for “finance influencers with large audiences.” We are looking for individuals who control the attention of active traders.

Fundamental metric: TRADER DENSITY - what percentage of this person’s audience is likely to consist of actual or aspiring active traders?

- An 800-follower TikTok creator with 350 Telegram members and 40 people following daily Gold setups can outperform a generic finance influencer with 100,000 followers.
- A live trader with 20-50 concurrent viewers can be highly valuable when those viewers repeatedly watch several-hour trading sessions.

04 Target Audience Size

Segment	Audience	What makes it attractive
Emerging	0-1,000	Frequent posting, visible trading activity, early community formation, live sessions or strong recent growth.
Micro	1,000-10,000	Highest-priority segment: establishing credibility while remaining commercially accessible.
Established Micro	10,000-50,000	High priority when content and engagement are strongly trading-specific.
Small KOL	50,000-100,000	Selective inclusion when trader density is exceptionally high.
Larger creators	100,000+	May be proposed, but are not the core objective.

- No absolute minimum follower requirement.
- Avoid databases dominated by obvious creators already targeted by Binance, Bybit, OKX, Exness, XM and other major platforms.

05 Persona 1 - Signal Provider / Signal Community Owner

VERY HIGH PRIORITY. Publishes concrete signals or setups, provides entries, stop loss and take-profit levels, posts market commentary, sells VIP access, or operates Telegram, Discord or WhatsApp groups.

Typical funnel	Desired evidence
Discovery	TikTok, Instagram, YouTube or X content.
Community	Telegram, Discord or WhatsApp with free commentary or setups.
Monetization	VIP signals, paid membership, education or broker/platform referrals.
High-fit format	XAUUSD BUY Entry SL TP1 TP2 TP3.

Multiple Take Profits are a natural product/content fit: creators can execute a complete setup directly on Quinex instead of forcing a conventional advertisement.

06 Persona 2 - Live Trading Streamer

VERY HIGH PRIORITY. Search aggressively for creators who trade or analyze markets live on YouTube Live, Kick, Twitch, Rumble, Discord, X and other niche platforms. Do not impose conventional reach thresholds: 10, 20 or 50 concurrent viewers can be relevant.

- London Session Live; New York Session Live; Live Gold Trading; XAUUSD Live; NAS100 Live.
- Forex Live Trading; Crypto Futures Live; Live Scalping; Trading Challenge Live; Funded Account Challenge.
- Long viewing sessions indicate a deeper creator-audience relationship than a simple social-media impression.

07 Persona 3 - Trading Setup / Analysis Creator

VERY HIGH PRIORITY. Creators who regularly publish actionable trade ideas on TradingView, X, Telegram, YouTube, Instagram, TikTok, Stocktwits or Discord. TradingView authors must be included even when they have little presence elsewhere.

- Entry, stop loss, take profit, TP1/TP2/TP3 and risk/reward.
- Support/resistance, market structure, price action, ICT, SMC, order blocks and liquidity.
- Breakout, scalping, swing setups and technical analysis.

08 Persona 4 - Emerging Trading Content Creator

VERY HIGH PRIORITY. Individuals actively trying to build a trading-focused presence. Typical formats include today's Gold trade, why I entered, my London session, \$100-to-\$1,000 challenges, road to funded, funded-account journals, strategy explanations, trading psychology and daily P&L; journals.

Growth trajectory matters more than current size. A creator with several hundred followers can qualify when posting quality, frequency and reach are accelerating.

09 Persona 5 - Small Trading Community Operator

The candidate may not consider themselves an influencer. They may own a 3,000-member Telegram despite having 1,200 Instagram followers, or run a 900-person Discord with 50-100 genuinely active members despite only 400 followers on X.

- Search Telegram, Discord, WhatsApp communities, Facebook Groups, relevant Reddit communities and paid/private trading communities.
- Community activity and trader density are more important than absolute membership.

10 Persona 6 - Trading Educator

Creators producing tutorials, technical analysis, strategy content, risk management, trading psychology, platform or indicator tutorials, Forex/Gold education, crypto derivatives education or prop-trading education.

- Prioritize educators whose audiences appear to actually trade.
- Deprioritize broad financial education with little evidence of active-trader intent.

11 Persona 7 - Indicator / Trading Tool Creator

Search for TradingView and Pine Script indicators, trading bots, Expert Advisors, algorithms, signal bots, Telegram bots, dashboards and market scanners. A developer with 2,000 followers and hundreds of indicator users may provide significant distribution.

12 Persona 8 - Prop / Funded-Trader Creator

HIGH PRIORITY. Search funded-account challenges, prop-firm reviews, FTMO-style challenges, road-to-funded content, account flipping, evaluation challenges, funded-trader journals and live challenge trading. These audiences already understand leverage, FX, Gold, indices, stop loss, take profit and active trading.

13 Priority Instruments

Tier 1	Tier 2
Gold / XAUUSD	Other indices
NAS100 and US30	Other FX pairs
Major FX pairs	Silver and Oil
BTC and ETH derivatives	Other actively traded CFDs
Crypto perpetual futures	Relevant spot crypto

Spot-only crypto audiences can be considered, but active leveraged traders are generally more aligned with Quinex.

14 Platforms to Search

The sourcing exercise must extend well beyond TikTok and must not reject candidates for lacking TikTok or Instagram presence.

Function	Platforms
Discovery / short-form	TikTok, Instagram Reels, YouTube Shorts, Facebook Reels
Live trading	YouTube Live, Kick, Twitch, Rumble, Discord, X
Trading-native	TradingView, Stocktwits
Community	Telegram, Discord, WhatsApp, Facebook Groups, relevant Reddit communities
Long-form	YouTube, podcasts, trading blogs and newsletters with communities
Trading conversation	X, Telegram, Discord

15 Cross-Platform Identification

The AI should reconstruct the creator's full ecosystem rather than score accounts independently.

Example: TikTok 3,200 → YouTube 1,100 → Telegram 750 → VIP Gold signals. Treat this as one creator business and conversion funnel, not four unrelated accounts.

16 High-Value Keywords & Behavioral Signals

Signal family	Search language
Markets	trading signals, forex signals, gold signals, XAUUSD, NAS100, US30, BTCUSDT, crypto futures, perpetuals, leverage trading
Trade structure	entry, SL, stop loss, TP, TP1, TP2, TP3, take profit, breakeven, move SL, partial close, risk reward
Trading style	scalping, day trading, swing trading, price action, ICT, SMC, smart money, order block, liquidity
Sessions	London session, New York session, Asian session
Community	VIP signals, free signals, premium signals, join Telegram, join Discord, VIP group, private group, mentorship
Prop trading	funded trader, funded account, prop firm, trading challenge, FTMO
Creator journey	trading journey, road to funded, \$100 challenge, account challenge, daily trading, live trading

17 Partnership Opportunity & Commercial Signals

Assess both the creator's ability to engage traders and the likelihood that Quinex can sign them. Existing monetization is useful evidence, not a requirement. A creator with strong trading content, an engaged audience and no broker or exchange affiliation can be an especially attractive prospect: Quinex could become their first meaningful platform partner.

- Very high priority: relevant trading content and a responsive audience, with no current affiliate links or broker deal. Do not reduce their score merely because monetization is unproven.
- Very high priority: a small paid signals, VIP or education community without a competing broker relationship.
- Existing affiliate links may demonstrate conversion experience. Record the partner, deal prominence, likely economics and any exclusivity or switching constraints.
- Prominent or exclusive competitor partnerships require selective assessment; they may be difficult or expensive to win.
- Judge the opportunity by audience quality, evidence of influence and realistic partnership accessibility - not affiliate presence alone.

18 Creator Velocity

Identify people before they become expensive. Examine changes over time, not just current totals.

- Follower and view growth; increasing posting frequency.
- Improving production quality; growing communities.
- Increasing livestream frequency; recently launched Telegram or Discord.
- Accelerating engagement and more substantive trader interactions.

A creator with 2,700 followers averaging 15,000 recent views may be far more attractive than a stagnant 50,000-follower account averaging 2,000 views.

19 Quinex Product-Fit Signals

Product-fit dimension	Evidence to prioritize
Multiple Take Profits	Creators regularly publishing Entry + SL + TP1 + TP2 + TP3.
TradingView	Creators heavily using TradingView for charting and analysis.
Active / leveraged trading	Forex, CFDs, indices, Gold and crypto derivatives.
Execution focus	Entries, execution, slippage, spreads, stops, partial positions, risk management, break-even and position management.

20 What We Do Not Want

Deprioritize	Unless...
Generic crypto influencers	They produce significant actual trading content, beyond news, memecoins, airdrops and token speculation.
Generic finance influencers	Their audience shows active-trading intent rather than savings, ETFs, passive investing or broad motivation.
Pure lifestyle influencers	Lifestyle supports a genuine, substantive trading identity.
Large generic audiences	Trader density and conversion evidence remain strong.

21 Quality & Compliance Red Flags

Flag or exclude candidates heavily associated with the following:

- Guaranteed profits, “risk-free” trading or extreme unrealistic win-rate claims.
- Clearly fake P&L, manipulated testimonials or fabricated results.
- Credible scam accusations, impersonation or fake followers/engagement.
- Pump-and-dump communities, binary-options scam funnels or highly deceptive claims.

Quinex wants commercially effective creators, but each partner must be credible enough to represent a trading platform.

22 Candidate Scoring Model

Follower count must deliberately carry low weight. Score the underlying quality of trader attention and distribution.

Criterion	Weight	Definition
Trader Density	25%	Likelihood that the audience consists predominantly of actual or aspiring traders.
Community Ownership / Strength	20%	Control of active Telegram, Discord, WhatsApp or paid/VIP communities.
Actual Trading Content	15%	Setups, trades, analysis, live execution or meaningful position management.
Creator Growth / Velocity	15%	Acceleration in reach, output quality, posting and community activity.
Quinex Product Fit	10%	Natural relevance to Multi-TP, TradingView and active leveraged products.
Commercial Intent	10%	Evidence of affiliate, subscription, education, tool or community monetization.
Absolute Reach	5%	Followers, views and overall distribution.

23 Exceptional Small Accounts

The engine must be permitted to return accounts below 1,000 followers - and even below 100 - when behavioral indicators are exceptional.

Valid prospect example: 380 followers | daily Gold setups | 150 Telegram members | live trading three mornings/week | TP1/TP2/TP3 | strong interaction | rapid growth.

24 Information Required for Every Candidate

Data group	Required fields
Identity	Creator name, handle, country and primary language.
Platform footprint	All known accounts; followers by platform; Telegram/Discord members; YouTube subscribers; average live viewers; average recent views.
Trading profile	Primary instruments; Forex/CFDs/Crypto/Prop classification; trading style; signal provider Y/N; Multi-TP usage Y/N; live trader Y/N.
Community	Telegram, Discord and WhatsApp presence and size; paid community Y/N.
Commercialization	VIP signals, courses, mentorship, indicators, bots, affiliate relationships and known broker/exchange partnerships.
Performance	Engagement, recent growth, posting frequency, livestream frequency and estimated audience quality.
Quinex assessment	Persona classification, product-fit score, overall score, selection rationale and compliance/red-flag notes.

25 Strategic Principle

The objective is not to identify the world's biggest trading influencers. The objective is to discover small trading businesses before they become big trading businesses.

Ideal prospect: a 22-year-old trader with 800 followers who streams Gold every morning to 25 people, posts XAUUSD setups using TP1/TP2/TP3, has 300 people in Telegram and has just started selling a \$20/month VIP group.

- Traditional influencer software may consider this person insignificant. For Ouinex, this can be an ideal prospect.
- Identify thousands early, build durable relationships, help them grow, and graduate the strongest performers into deeper partnerships.
- Build a distributed global network of traders, creators, signal providers, community owners and live streamers who grow alongside Ouinex.

THE OPERATING MANDATE

Find trader attention early. Score commercial behavior over vanity reach. Build relationships before the market prices them in.
